Product Description

M10 GPS Flight Controller

The M10 GPS uses multi-constellation GNSS powered by u-blox M10 series, a concurrent GNSS receiver which can receive and track multiple GNSS systems. Owing to the multi-band RF front-end architecture all four major GNSS constellations, GPS, Galileo, GLONASS and BeiDou can be received concurrently.

GNSS Support: The M9N GPS module supports multiple global navigation satellite systems (GNSS), including GPS (USA), GLONASS (Russia), Galileo (Europe), BeiDou (China), and QZSS (Japan). This multi-constellation support enhances positioning accuracy, reliability, and availability in various environments.

High Accuracy: Depending on the model and configuration, the u-blox M10 modules can provide high-precision positioning with centimeter-level accuracy when used with Real-Time Kinematic (RTK) correction services or differential GNSS (DGNSS) techniques. This level of accuracy is crucial for applications such as precision agriculture, surveying, and autonomous vehicles.
