RAW MATERIAL-T800

To meet a more powerful, rigid, and lighter structure, it uses high modulus carbon fiber material T800, which is in high specific modulus, corrosion resistance, fatigue resistance, intensity up to 5490MPa. Thrust produced stably.

OPTIMIZED MOMENT OF INERTIA

The prop shape was designed based on power dissipation, thrust, efficiency and moment inertia of a propeller, especially for the special condition of multicopter aircrafts. Smaller tip area and bigger root area, it helped to get the optimized moment of inertia while remain the equal thrust output, so the responsive speed could be more sensitive.
