Product Description

HAVOC 24x7.2 Inch polymer folding propeller

New Released! Upgraded New Generation Ultralight CF Prop, CB2 – Light as “O2”. BECAUSE CARBON+O2

High quality efficient carbon fiber ultralight drone propeller – CB2

Designed for endurance flight, prop weight reduced by 20%-30%, flight time far extended

Thrust increased by 3-7%. Efficiency increased by 2-6%.

Almost zero vibration. Every propeller was balanced 3 times during production.

By simulation and analyses, the tip load was decreased without the loss of thrust by a multi optimization method, which is helpful to save structure weight. The values for propeller beta were optimized to match thrust demand at different rotation rate. The prop shape was designed based on power dissipation, thrust, efficiency and moment inertia of a propeller, especially for the special condition of multirotor aircrafts, smaller tip area and bigger root area, it helped to get the optimized moment of inertia while remain the equal thrust output, so the responsive speed could be more sensitive.
