## HX-330 Toray 3K Carbon Level 6 wind resistance

### 6 wind resistance

Level 6 wind resistance means that the drone can withstand wind speeds of up to 50-61 km/h (31-38 MPH). This is the equivalent of a strong wind, which can be challenging for most drones, but manageable for well-designed, high-performance drones.

**Wind Resistance Rating:** Level 6 indicates that the drone can fly in strokes to strong winds and is suitable for use in environments where wind conditions can cause instability for small drones.

**Flight stability:** The HX-330 is designed to be stable and maintain control in strong winds. Its large engines, high-torque propellers and advanced flight control systems will help offset the impact of wind on the flight path and payload.
